主题: RE: SRS090125600006: [XCON] 3 other BH servers that has queued mail only to QSR-S-01001

Dear Norman,

Thanks for the reply. I am glad to hear that the cause on the network has been found and the issue is resolved.

Based on your confirmation, I am going ahead to close this case. For your records, I summarized the key points below:

Symptoms:

=====

Messages from AMSDC1-s-03326 to QSR-S-01001 were stuck in the remote delivery queue.

Cause:

=====

Exchange server will send x-exps BLOB for authentication. However, only partial BLOB was received by the remote server. Thus, the remote server kept the session waiting till it timed out. It appears that a network device dropped some packets containing the BLOB and caused the problem.

Resolution:

=====

Your network team re-configured the device to bypass all email traffics and resolved the issue.

Once again, I would like to thank you for contacting Microsoft Enterprise Communication Support Service. I hope that you were delighted with the service provided to you.

If you require further assistance regarding this issue, please feel free to write to me directly with any supplemental information. The issues will then be reopened and forwarded back to me for follow-up. I am happy to be of assistance.

Thank you for choosing Microsoft.

Subject: RE: SRS090125600006: [XCON] 3 other BH servers that has queued mail only to QSR-S-01001

Thanks, Yin :) Just minutes after I sent this email to you, the network found the cause. It was traffic shaping by the Riverbed devices in Amsterdam which somehow resulted in the packet drops seen on QSR-S-01001. Armed with this information, they placed a workaround which involved a by-pass rule for all email traffic - hence no email traffic is optimized/shaped by the Riverbed devices. Immediately we see mails flowing and the issues resolved.

Obviously, your detailed analysis and clear explanation on the findings were key to convincing the network folks where the problem lies - i.e. outside the Exchange servers. As the cause is clear, we can have this case closed :) Many thanks for your tireless effort this week in helping solve this rather complex problem.

Regards,
Norman Choo

Subject: RE: SRS090125600006: [XCON] 3 other BH servers that has queued mail only to QSR-S-01001

Hi Norman,

Thanks for sending me the netmon trace.

I picked one of the SMTP sessions (port 8642 on amsdc1-s-03326) to review and the result is same.

AMSDC1-s-03326 sent the x-exps GSSAPI BLOB as below:

17	60.546488	{TCP:4...	156.31.220.134	145.26.110.72	TCP	TCP:Flags=...A..., SrcPort=SMTP(25)
18	60.718361	{TCP:4...	156.31.220.134	145.26.110.72	SMTP	SMTP:Rsp 334 GSSAPI supported, 22 b
19	60.718361	{TCP:4...	145.26.110.72	156.31.220.134	SMTP	SMTP:Data Payload, 1436 bytes
20	60.718361	{TCP:4...	145.26.110.72	156.31.220.134	TCP	TCP:[Continuation to #19] [Bad CheckS
21	60.718361	{TCP:4...	156.31.220.134	145.26.110.72	TCP	TCP:Flags=...A..., SrcPort=SMTP(25)
22	60.718361	{TCP:4...	156.31.220.134	145.26.110.72	TCP	TCP:Flags=...A..., SrcPort=SMTP(25)
23	60.718361	{TCP:4...	145.26.110.72	156.31.220.134	TCP	TCP:[Bad CheckSum]Flags=...A... SrcPort=...

While QSR-s-01001 received the tail only:

13	60.562500	inetinfo.exe	{TCP:3...	145.26.110.72	156.31.220.134	SMTP	SMTP:Data Payload, 15 bytes
14	60.562500	inetinfo.exe	{TCP:3...	156.31.220.134	145.26.110.72	SMTP	SMTP:Rsp 334 GSSAPI supp
15	60.734375	inetinfo.exe	{TCP:3...	145.26.110.72	156.31.220.134	SMTP	SMTP:Data Payload, 654 byte
16	60.734375	inetinfo.exe	{TCP:3...	156.31.220.134	145.26.110.72	TCP	TCP: [Bad CheckSum]Flags=...
17	60.734375	inetinfo.exe	{TCP:3...	145.26.110.72	156.31.220.134	TCP	TCP:Flags=...A... SrcPort=...

If your network team has different findings, or if you have any further questions, please feel free to let me know.

Thanks & Regards,
Yin

Hi Yin,

We just performed another test while enabling Netmon on QSR-S-01001 & AMSDC1-S-03326 and a network sniffer on the switch, which QSR-S-01001 is connected to. While the internal network team is looking at this, can you also analyze the captures and comment? Thanks.

Regards,

Norman Choo

Hi Norman,

Thanks for the reply. The hotfix should not be related to this issue.

And the network monitor's driver will capture all the packets with the network adapter, thus the missing packets are not related to OS. Instead, it indicates that the NIC didn't receive the packet.

I hope this helps to clarify.

Thanks & Regards,

Yin

Yin,

The issue is still being worked on with the network folks in Shell. Just to ensure we cover all angles, at the time below, the server was rebooted to allow the Hotfix KB958687 to take effect. Can you confirm whether this is not causing the data loss shown in your investigation?

Another way of asking this is, during a Netmon packet capture, are these exactly what was sniffed off the network unaltered by the OS?

Subject: RE: SRS090125600006: [XCON] 3 other BH servers that has
queued mail only to QSR-S-01001

Dear Norjehan & Norman,

Thanks for your time tonight in working with us on this issue.

Here are our findings so far.

1. The connection from the BH servers to QSR-S-01001 was dropped by QSR-S-01001 due to the error
451+Timeout+waiting+for+client+input
2. The event logs on the BH servers also indicated for the same:
Event Type: Warning
Event Source: MExchangeTransport
Event Category: SMTP Protocol
Event ID: 7002
Date: 1/26/2009
Time: 1:26:12 PM
User: N/A
Computer: AMSDC1-S-03326
Description:
This is an SMTP protocol warning log for virtual server ID 1, connection #31. The remote host "156.31.220.134", responded to the SMTP command "x-exps" with "451". The full command sent was "X-EXPS". This may cause the connection to fail.
3. According to the SMTP logs and the event logs, the 451 timeout error occurred after the BH servers attempted to authenticate itself to QSR-S-01001 server after the x-exps GSSAPI command.
4. X-EXPS GSSAPI command is issued by the BH server which means the BH server attempted to use Kerberos authentication. After the command the BH server will send out the authentication BLOB (in binary) to the QSR-S-01001. Normally, QSR-S-01001 will return the result of authentication back in order to move the transmission forward.
5. So we captured network monitor traces on both servers.
 - a. On the BH server, we can see the authentication BLOB was sent out already

2	0.000000	{TCP:3... 145.26.110.72
5	0.000000	{TCP:3... 145.26.110.72
8	0.328121	{TCP:3... 145.26.110.72
12	0.531243	{TCP:3... 145.26.110.72
17	0.703116	{TCP:3... 145.26.110.72
18	0.703116	{TCP:3... 145.26.110.72
49	624.804502	{TCP:3... 145.26.110.72
51	624.804502	{TCP:3... 145.26.110.72
52	624.804502	{TCP:3... 145.26.110.72

- b. However, on the QSR-S-01001 server, only the tail of the BLOB was received.

104857	374.187500	inetinfo.exe	{TCP:... 145.26.110.72	QSR
104858	374.187500	inetinfo.exe	{TCP:... QSR-S-01001	145.
310974	998.140625	inetinfo.exe	{TCP:... QSR-S-01001	145.
310975	998.140625	inetinfo.exe	{TCP:... QSR-S-01001	145.
311052	998.296875	inetinfo.exe	{TCP:... 145.26.110.72	QSR
311053	998.296875	inetinfo.exe	{TCP:... QSR-S-01001	145.

Frame Details	
Frame: Number = 104857, Captured Frame Length	
Ethernet: Etype = Internet IP (IPv4), Destination	
IPv4: Src = 145.26.110.72, Dest = 156.31.220.1	
Tcp: [Segment Lost] Flags=...AP..., SrcPort=365	
Smtip: Data Payload, 654 bytes	

As the QSR-S-01001 server didn't receive the whole BLOB, it kept waiting for other data until it timed out in 10 minutes.

104565	373.468750	inetinfo.exe	{TCP:... 145.26.110.72	QSR-S-01001	TCP

9D..

So we can see that others were lost during the transmission. A rough calculation indicated that we lost at least $1436+12=1448$ packets

Till now, it is clear that the issue is on the network between the two servers. It is probably a filter dropped some packets.

A potential workaround is to disable Integrated Windows Authentication (Kerberos) on the target server (QSR-S-01001) as we will then have different x-exps BLOB and would not match with the pattern of any filters.

Please feel free to let me know if you have any questions or concerns.

Thanks & Regards,
Yin

Hi Yin Cui,

Below is the error logs that are found:

Event Type: Error
Event Source: MExchangeTransport
Event Category: SMTP Protocol
Event ID: 7004
Date: 1/26/2009

Time: 1:04:34 PM

User: N/A

Computer: AMSDC1-S-03326

Description:

This is an SMTP protocol error log for virtual server ID 1, connection #1428. The remote host "145.26.110.48", responded to the SMTP command "xexch50" with "500 5.5.2 Error processing XEXCH50 command ". The full command sent was "XEXCH50 ". This will probably cause the connection to fail.

Dear Norjehan ,

Thank you for contacting the Microsoft Global Technical Support Center.

My name is Ray and I' m a Customer Service Representative. As it is non-business hour and engineer Yin Cui may have left office for today. Could you advice what we should do to help? Shall we raise to Sev.A and let our on-duty engineer to do the troubleshooting? Or we will inform Yin Cui and do the trouble shooting tomorrow morning? We are looking forward for your reply.

Should there be any additional enquires, please do not hesitate to contact us and We would be glad to assist.

Thank you for choosing Microsoft!

Best regards,
Ray Zhang

Hi Yin Cui,

The issue still occurs. Below are the screenshot of the queue:

Kindly provide the password to upload the data to the workspace. Thanks.

Regards,
Norjehan

Subject: SRS090125600006: [XCON] 3 other BH servers that has queued mail only to QSR-S-01001

Dear Edna,

Thanks for contacting Microsoft Enterprise Communication Support service. My name is Yin Cui. For your reference, the service request ID is SRS090125600006.

According to your description, I understand that 3 of bridgehead servers were not able to deliver messages to the server QSR-S-01001.

If I misunderstood your concerns, please feel free to let me know.

I am not sure if this issue still persists. If yes, can you please take the following action items?

1. Note down (or capture a screen shot) of the queue status in Exchange System Manager. If the queue status is in Retry, please highlight the queue and check the detailed information of the queue status.
2. Turn on SMTP logs on SMTP virtual server. Please ensure that you have checked all properties for logging. After that, let's click Force Connection in the queue viewer. If the status is back to retry, please send me the latest SMTP logs for further analysis.

If this issue does not occur currently, we may not have thorough data for further investigation. However, the following information is always helpful to understand some background information which could be relative with the issue.

1. MPS Report for Exchange on both the source servers and the destination servers. The utility can be downloaded from:
http://download.microsoft.com/download/b/b/1/bb139fcb-4aac-4fe5-a579-30b0bd915706/MPSRPT_Exchange.exe
2. If you could recall the queue status, can you please let me know whether the queue was in Retry or Active when the issue occurred?
3. If you ever turned on SMTP logs on the source or destination servers before, can you please collect the SMTP logs on the servers for the date when the issue occurred?

You can upload all the data you've collected to the following workspace:

<https://sftasia.one.microsoft.com/choosetransfer.aspx?key=f3e5e2e4-1505-4ffb-8250-6e717e2b0aaf>

If you have any questions or concerns, please feel free to let me know. I am glad to follow up with you.

Regards,

Yin Cui
